Full-stack engineer with 8+ years shipping products end-to-end — from front-end to back-end, infrastructure, and AI. Led complex projects across e-commerce, energy, and AI domains. Invested in CI/CD, documentation, and mentoring.

SKILLS

Core: TypeScript, Python, Go, C#/.NET, React, Next.js, Tailwind, Node.js, SQL, Kotlin
Infrastructure: PostgreSQL, TimescaleDB, MongoDB, AWS, GCP, Docker, Kubernetes, Terraform, CI/CD
Domains: Playwright, Sentry, LLMs/RAG, IoT Protocols (Modbus, EEBus), AI-Assisted Development

EXPERIENCE

2025 – Now **Senior Software Engineer** **Optima**
Building an Energy Management System end-to-end and scaling it from the ground up

- Architected a plugin system for custom device-logic management, supporting 30+ device groups
- Built protocol orchestration layer for Modbus and EEBus, processing 1.4M+ daily telemetry data points
- Developed web and mobile applications as the primary engineer, shipping MVP in under 3 months
- Established CI/CD pipelines and coding standards optimized for AI-assisted development (Claude, Copilot)

`TypeScript / Python / .NET / PostgreSQL / TimescaleDB / Docker`
`Terraform / Tailwind / Sentry / Energy Management / Modbus / EEBus`

2024 – 2025 **Senior Software Engineer** **Lemony.ai**
Led a team of 3 engineers building secure, offline LLM solutions bridging hardware, software, and cloud

- Designed a multi-tenant demo platform on GCP with isolated GPU sharing, onboarding 10+ enterprise clients
- Architected a cross-platform app framework (web + desktop), reducing new product delivery time by 50%
- Built event-driven LLM inference pipelines (RabbitMQ) with RAG and knowledge graphs for document processing
- Developed embedded device firmware; contributed end-to-end from hardware to stakeholder demos

`TypeScript / Go / Python / .NET / LLMs / RAG / GCP`
`Docker / Terraform / RabbitMQ / Tailwind / Sentry / Edge AI`

2023 – 2024 **Senior Software Engineer** **TimeTac**
Modernized a legacy monolith into a scalable, developer- and product-friendly platform

- Led migration of core systems from PHP monolith to TypeScript/Next.js, reducing page load times by 40%
- Built a modular front-end platform with A/B testing, feature flags, and multi-country content delivery

`Next.js / TypeScript / Node.js / GitLab CI`
`Tailwind / Playwright / Sentry / A/B Testing / Headless CMS`

2022 – 2023 **Senior Software Engineer** **Netconomy**
Developed enterprise e-commerce platforms and reusable components adopted across the organization

- Built core UI framework components adopted by 5+ engineering teams across enterprise clients (incl. Douglas)
- Delivered custom checkout and personalization flows for high-traffic storefronts, improving conversion rates

`TypeScript / SAP Commerce Cloud / GitLab CI`
`E-commerce / Enterprise / Component Architecture`

2021 – 2022 **Software Engineer** **Joom**
Shipped international e-commerce products and analytics tools in a high-scale environment

- Built customer, merchant, and admin portals serving millions of users across 10+ international markets
- Developed a real-time analytics system with custom event tracking, processing 1M+ daily events
- Managed Kubernetes deployments and CI/CD pipelines for the team's microservice fleet

`Next.js / TypeScript / Node.js / MongoDB`
`Kubernetes / Terraform / Microservices / i18n / Analytics`

2018 – 2021 **Software Engineer** **JetBrains**
Built internal analytics platforms and reusable UI libraries used company-wide

- Developed analytics dashboards used by 500+ employees across 20+ product teams
- Built a reusable React component library adopted across multiple internal tools
- Automated CI/CD pipelines using Kotlin DSL and TeamCity, reducing release cycles by 60%

`React / TypeScript / D3.js / Kotlin`
`AWS / Terraform / TeamCity / Kubernetes / CI/CD`

EDUCATION

2026 – Now **Master's Degree** **TU Graz**
Computational Social Systems.

2016 – 2020 **Bachelor's Degree** **National Research Nuclear University MEPhI**
Hardware-focused Computer Science program.
Authored a thesis on a web-based team contest system.
Selected coursework: Computer Networks, Operating Systems, Microprocessors.
